TEXAS' SINGING WELL.

It Gives Out Weird Sounds and Rises and Falls With the Wlnd.

About three miles west of Cedar Bayou, Harris county, Texas is a remarkable well. When it was dug no one can tell, but it has been in existence for more than 60 years. The well is known as the "Singing Well."

In calm, fine weather a sound like that of an Aeolian harp comes upward between the angles of vines below. At times the sound seems nearer and clearer; then again it recedes, as if far away, and reaches the ear very faintly. These changes take place every few minutes and with great regularity.

With an east wind blowing the water in the well gets very low and the mysterious musical sound very faint. A strong west wind causes the water to rise and the sound to increase in volume and clearness.

But it is just before a great norther Why is justice in Washington that the old well plays its wildest pranks. Then, for several hours, the water rises to within a few feet of the Because it is changeable. The top of the well, and emits the weirdest, wildest poises that ever reached buman ears. At such times even the water drawn out with buckets moans

The well is about 60 feet deep. A few years ago the land on which it The BEE editor is not looking | is located was longit to a man that for an office and neither does he came from the well, employed two men to till it up. They shoveled dirt into the well two weeks, but it did not effect the depth of water perceptibly, and they threw up the contract.

From the measurements of the excavations they had made it was calculated that the well should have been filled up a little more than twice.

The water is very clear, with a bluish tint, and is fairly palatable. No other wells in the neighborhood show such pranks as are played by the "Singing Well."

Could Not Shoot,

A Hindu looks upon the slaughter of an animal with the same dread and horror with which he would witness the taking of a life of a human being. It would be well for some of E. M. Hewlett is the most manly the hunters from our own country to negro attorney before the District learn from such pagans a lesson in humanity. Rev. B. Fay Mills tells the story of a hunter who employed as a decoy for deer a peculiarly constructed whistle, which closely imitated the voice of a young fawn calling its

With his rifle in hand ready for Instant action, be was one day blowing his whistle, when suddenly a mother deer thrust her head out of the bushes and looked straight toward him. There she stood, trembling with fear, yet looking this way and that in search of the little one which she supposed to be in danger. The hunter

"As I looked into those eloquent eyes, anxiously glancing here and there with maternal fear, my beart melted. I could not shoot."

Young deer that have not been chased or fired at by hunters will frequently come very near to unarmed travelers. The writer, while driving along a country road in northern Maine, has had a deer walk just in advance of the horse for some distance; and it is well known that wild deer often come into pastures and feed with the cows. To take advantage of this confidence seems very near to

Rats and Underground Wires.

Rats are playing bavec with the under-ground telephone and telegraph cables in St. Louis. They have discovered that the wires are covered with paraffined paper, and they rather like the taste. To satisfy their appetites, they must gnaw through the lead casing around the wires. It has happened in a number of cases that the rats in gnawing through the lead cables, to get at the greased paper, have bared the copper wires in such a manner as to make it impossible to establish communication over them Every time this happens it costs the company whose wires are interrupted all the way from a few dollars to S. OPPENHEIMER & BL several hundred. The telephone men are trying to devise some means of stopping the depredations.

The People Who Work Best.

The people in all lines of duty who do the most work are the calmest, most unburried. Duties never wildly chase each other in their lives. One task never turns another out, not ever compels hurried, imperfect doing. The calm spirit works methodically, doing one thing at a time well, and it, therefore, works swiftly, though never appearing to be in baste.

THE HUMAN BODY.

Many Odd Facts Which Are Not Generally Known.

Human beings are of all sizes, but the tall man is less common than the short; only one man in every 208 exceeds the height of six feet. For every foot of stature a man should weigh from twenty-six to twenty-eight pounds, a proportion that is not the lot of all in these hurrying, scurrying

Seeing Bullets as They Fly. "As every sportsman knows," said an enthuiastic hunter, "it is easy to see a rifle bullet in the air, and those fired from the new high-power guns are very curious to look at. Stand a dozen yards to one side of the mark and let a friend blaze away at any range with a small calibre weapon using smokeless powder, and you'll see a strange, pluish-white streak the instant the bullet strikes home. The streak is apparently a couple of inches wide and several feet long, and is more like a flash of light than anything else I can hink of. With the old-fashioned Remington or Springfield carbine the bullet has the appearance of a long black rod, and I don't know why there should be such a difference in the optical illusion produced by the smaller calibre. I have heard some people deny that the bullet can be seen, but they are very much in error. It all depends on getting the right view point. A few feet either way will render the missle invisible, but the right spot is soon found by experiment, and after

that the thing is as plain as day."

New Use of Glass, The latest use of glass is instead of gold as a material for stopping decayed teeth. It answers splendidly and is far less conspicuous than the yellow metal. Of course, it is not ordinary glass, but it is prepared by some new patent process, which renders is soft and malleable. Glass too is being extensively used for church bells. It can be toughtened so that there is no risk of it cracking, and the tone is said to be beyond anything yet

invented, perfect, soft and sonorous.

Opals Are Safe. Opals will soon be considered lucky stones if it is found that they are burglar-proof, which looks as if it might be the case from the accounts given of a recent robbery in Spokane, Wash. The burglars there broke into a jewelery shop and took a quantioutfit of New Type with the most ty of jewelry, but left the most valuable stones, a number of opals, which they could have taken as easily as the cheaper and more telltale goods which they carried away.

Poor Field for Inventors.

The patent laws of Japan afford little protection to foreign manufacturers or inventors. A native may patent any trademark of a foreigner for the water, even if it be out of sight if the patent be taken out before the real owner has moved in the matter. Then the only course open to the owner is to buy from the native the right to use his own trademark in Japan.

"The Queen's Health." Every night, in every ship in Her Majesty's Navy, the Queen's health is arunk by the officers of the vessel; but is is a curious fact that is is al-

> Non-Freezing Water Pipes, The Germans, who are so far ahead

of many nations in a certain class of technical skill, have incorporated into their plumbing practice a non-freezing the water from being frozen, but to provide an opportunity for its expansion by cold. Into the iron pipe, as far as it is above the ground, there is inserted a second narrower pipe of thin elastic substance, such, for instance, travel not far short of 800 miles an as rubber. This insertion remains maffected by the ordinary pressure; but if the water should be frozen by extreme cold the elastic insertion is compressed by so much as the volume of water is increased by the freezing. With the coming of the thaw the insertion expands again to its original circumference. The object of the tin or lead around the insertion is to prevent an unpleasant taste or odor being imparted to the water. It is said that water pipes provided with such an insertion have withstood a cold test of 40 degrees centigrade, while others that were no so provided invarably burst at that temperature.

Life on a Torpedo Boat. So injurious is life on a torpedo boat that a year's continuous service will mentally and physically incapacitate a man. This assertion is made on the authority of Lord Charles Beresfool. but that the strain on any one serving on these crafts is very great is shown by the fact that to one months service the British naval regulations allow one week off. Austria is endeavoring to mitigate the hardship of service on these boats, and life on one built for the Austrian navy, and tried on the Thames recently, was demonstrated to be pleasanter than on those of the Eng-

Just Like Other People.

Though the German emperor has an annual income of about three-quarters of a million sterling, the empress, who dresses "like a good-class woman." is most economical. The children's clothes are repaired in the workroom, where her own wardrobe is mended. When the clothes are outgrown they are cut up for the smaller members of the family, which can very well be done, seeing that six out of the seven

children are boys.

All Muscle. The elephant has more muscles in its trunk man any other creature possesses in its whole body, the number being, according to Cuvier, not fewer than 40,000; while in the whole of his body man can only boast of 527. This is why the elephant's trunk is so exceedingly strong, and at the same time so extremely delicate in its movements.

Activity of Baby Crocodiles.

The moment a young crocodile breaks its shell it is to all intents and purposes as active as it is at any time during its life. It will make straight and a good distance off, and it will pursue its prey with eagerness and agility during the first hour of its free existence.
